

Hi Dan,

I spoke with the owner about the light fixtures. They are looking to reuse most of the existing light fixtures, and only replace the ones that need replacing.

I have attached images of what the existing fixtures look like.

If replaced, they will use a full cut-off fixture, but if they are existing, do you need a photometric plan of the existing fixtures as well?

If you need a photometric plan for the existing ones, as well, does it matter if obviously they are not the full cut-off type fixtures?

Thank you Kindly,
Ryan Schultz
